

**Guaranteed as good as new**

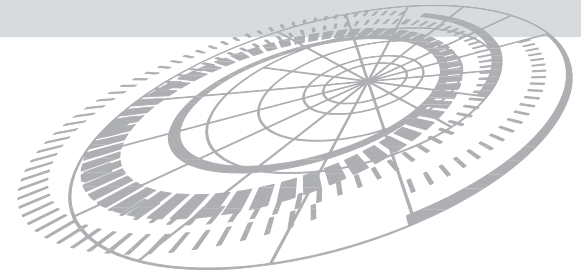

Remanufactured turbochargers by BorgWarner

## Reman Turbochargers

### Generally overhauled, economic and reliable

BorgWarner Turbo Systems is the global product leader in the field of pioneering exhaust gas turbochargers. Our turbocharging systems excel through their revolutionary technologies – and in particular through their outstanding reliability and durability.

So when it comes time to change a turbocharger, you don't necessarily always need a new one. The almost legendary quality of our products is also to be found in our reman turbochargers – the cost efficient alternative to a new unit.

### Generally overhauled, economic and reliable

BorgWarner Turbo Systems is the global product leader in the field of pioneering exhaust gas turbochargers. Our turbocharging systems excel through their revolutionary technologies – and in particular through their outstanding reliability and durability.

# After

### No-compromise series pro- duction quality – guaranteed

With our remanufactured turbochargers we offer turbocharging systems which have had all wearing and small parts replaced with new original parts from our series production line. State-of-the-art manufacturing equipment and processes as well as detailed test schedules in each processing stage ensure that the individual components meet the highest of demands and that the reman turbochargers offer the same high performance and reliability that the automotive industry has come to expect of our products.

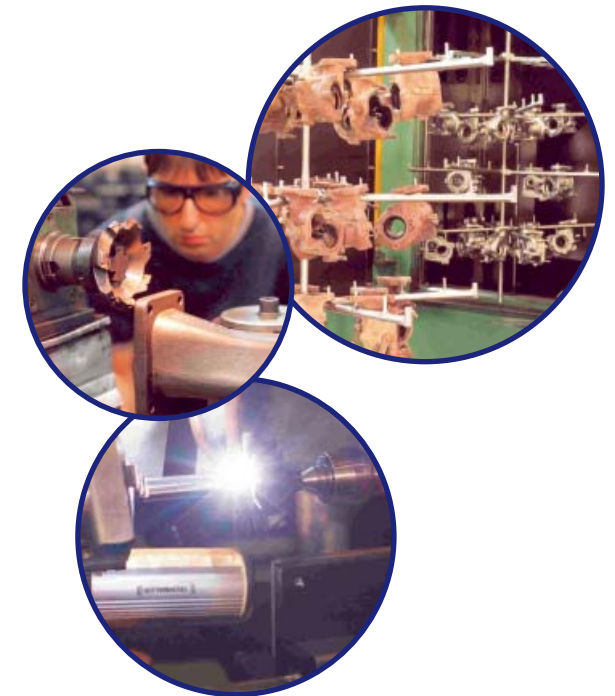

Reman turbochargers are subject to the same strict quality control processes as our brand new series products. We also employ the latest quality standards and test procedures to ensure the quality of our generally overhauled booster systems: Advanced balancing units allow working speeds of up to 250.000 rpm. This class-leading balancing technology is just one of many prerequisites that enable us to recondition all turbochargers with the highest quality. This is why we offer our customers the same warranty for reman turbochargers as for the turbochargers produced in our series production facility.

### For every vehicle and every application

As a leading series manufacturer, BorgWarner Turbo Systems has accumulated decades of experience in reconditioning turbochargers. With a global capacity of approximately 150.000 reman turbochargers per year we can offer a broad range of passenger car and commercial vehicle products. Integrated into our logistics concept and interactive communication service, these turbochargers are available just as fast as our original spare parts.

By opting for a reman turbocharger by BorgWarner Turbo Systems you are getting a particularly low-priced alternative that not only meets all your performance and consumption requirements, but also offers you peace of mind with the same quality and warranty as a new series product.
