### My \$9 vented wheel liners...

Posted by: [tybmw](#) on 2006-05-19 21:55:11

Account #: [60432](#)

So I was going to order some RS6 liners but the dealership was out of stock and said it would be at least a mc to get them in...so I went to home depot and walked around until I found the perfect materials to use. I ended with a 24"x24" heating vent.

Well then I went to work...

I ended up bolting it up to the plastic at about 7 places and also put down a bead of silicone to help keep it tight. Everything was installed I checked the clearance between the tire and the wheel liner, it ended up being the same as stock. So I won't have any rubbing issues.

Started on the passenger side...

Drivers side...

6-speed, H&R springs with Bilstein shocks, Magnaflow 2.5" exhaust, K&N cone intake, Frankenstien wheel line vents, Piggie downpipes, Forge 007's, APR stage 2+
